JOINS

1.Query for Creating table named Course:

create table Course(Courseid varchar(20) PRIMARY KEY,coursename varchar(300));

insert INTO Course values('C101','Java'),('C102','Python'),('C103','Excel');

OUTPUT->

Courseid	coursename
C101	Java
C102	Python
C103	Excel

2.Query for creating table named Student:

create table Student(Stdid varchar(20) PRIMARY KEY ,Stdname varchar(30),Courseid varchar(30));

INSERT into Student values('Std101','Anil','C102'),('Std102','Abhinav','C102'),('Std103','Rahul',NULL);

OUTPUT->

Stdid	Stdname	Courseid
Std101	Anil	C102
Std102	Abhinav	C102
Std103	Rahul	NULL

Inner join

3.Query to implement inner join

select Student.Stdid,Student.Stdname,Course.coursename,Course.Courseid from Student inner join Course on Student.Courseid=Course.Courseid;

OUTPUT->

Stdid	Stdname	coursename	Courseid
Std101	Anil	Python	C102
Std102	Abhinav	Python	C102

Left join

4.Query to implement left join

select Student.Stdid,Student.Stdname,Course.coursename,Course.Courseid from Student left join Course on Student.Courseid=Course.Courseid;

Output->

Stdid	Stdname	coursename	Courseid
Std101	Anil	Python	C102
Std102	Abhinav	Python	C102
Std103	Rahul	NULL	NULL

Right join

5.Query to implement Right join

select Student.Stdid,Student.Stdname,Course.coursename,Course.Courseid from Student right join Course on Student.Courseid=Course.Courseid;

Output->

Stdid	Stdname	coursename
NULL	NULL	Java
Std102	Abhinav	Python
Std101	Anil	Python
NULL	NULL	Excel

Outer join

6.Query to implement Outer join

select Student.Stdid,Student.Stdname,Course.coursename,Course.Courseid from Student left join Course on Student.Courseid=Course.Courseid union select Student.Stdid,Student.Stdname,Course.coursename,Course.Courseid from Student right join Course on Student.Courseid=Course.Courseid;

Output->

Stdid	Stdname	coursename	Courseid
Std101	Anil	Python	C102
Std102	Abhinav	Python	C102
Std103	Rahul	NULL	NULL
NULL	NULL	Java	C101
NULL	NULL	Excel	C103

Cross Join

7.Query to implement Cross Join

select Student.Stdid,Course.Courseid from Student cross join Course;

Output->

Stdid	Courseid
Std103	C101
Std102	C101
Std101	C101
Std103	C102
Std102	C102
Std101	C102
Std103	C103
Std102	C103
Std101	C103

Self-cross Join

8.Query to implement Self Cross

Creating table Employee

create table Employee(empid varchar(20) ,empname varchar(300),managerid varchar(20));

INSERT into Employee values('Std101','Anil','Std102'),('Std102','Abhinav',Null),('Std103','Rahul','Std101');

Output->

empid	empname	managerid
Std101	Anil	Std102
Std102	Abhinav	NULL
Std103	Rahul	Std101

Implementation of self cross

select emp.empname as Employee_Name,manager.empname as Manager_Name from Employee emp join Employee manager on emp.empid=manager.empid;

	Employee_Name	Manager_Name
▶	Rahul	Anil
	Anil	Abhinav
